

430-MLS

The MaxVac MV-430-MLS is a single phase high suction vacuum for use in many different areas. Powered by 2 by-pass motors operated independently. The motor head is silenced to reduce the noise created.

The vacuum is fitted with M Class filters which are cleaned using the MV Airpulse system in order to increase its life and maintain its suction efficiency. The filters are cleaned by operating a flap above the filter which forces air through the conical filter in reverse.

The vacuum is fitted with the Longopac bagging system allowing waste to be disposed of safely.

RECOMMENDED ACCESSORIES

FEATURES

Air Pulse filter cleaning

- High efficiency filter cleaning means higher suction
- Filters last longer

High suction

- Removes more particles from the source
- Can carry dust over long distances

Silence Motor Head

- Low noise output when in use

Two height settings

- One transport position and one operation position

Model	MV-430-MLS
Voltage	230/110v 50/60hz
By-Pass Motor	2 (single phase)
Vacuum Rate	2500mm/H2O
Filter Type	Cartridge
Filter Surface	30000cm ²
Air Flow	360m ³ /h
Capacity	Longopac
Suction Inlet	Ø50mm
Noise Level	72dB(A)
Dimensions (cm)	50w x 56d x 100h
Weight	31Kg
