

220-L

The MaxVac MV-220-L Pre-separator with Longopac safe collection and disposal system can be used with all MaxVac vacuums. This means you can collect large amounts of material which increases the collection capacity and improves the disposal of collected materials.

The Longopac bagging system is especially suitable in applications that involve collection and disposing of hazardous and toxic materials. These can be dangerous to operators and need to be disposed of safely to prevent any contact with people and any diffusion in the work environment.

FEATURES

- Improves the collection capacity and disposal of collected materials
- Suitable for the collection and disposal of hazardous and toxic materials
- Can be used with all MaxVac vacuums
